INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/US04/21317

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims <u>1-49</u>	YES
	Claims <u>NONE</u>	NO
Inventive Step (IS)	Claims <u>NONE</u>	YES
	Claims <u>1-49</u>	NO
Industrial Applicability (IA)	Claims <u>1-49</u>	YES
	Claims <u>NONE</u>	NO

2. Citations and Explanations (Rule 70.7)

1. Claims 1-49 lack an inventive step under PCT Article 33(3) as being obvious over Kato et al. (US 5,170,842) in view of Modine (US 1,853,315).

Kato et al. discloses a heat exchanger having fins with struck-out portions to direct and facilitate air flow. The struck-out fin elements consist of legs 15 and raised portions 14.

Modine discloses a heat exchanger in which air flow characteristics are improved by the use of stuck-out tabs 14.

It would have been obvious to one skilled in the art at the time the invention was made to provide Kato et al. with struck-out portions in the form of tabs, as shown by Modine, rather than legs and connecting portions merely as an exercise of choice between equivalent structures which are well known in the art. Kato et al. advises that heat exchange efficiency can be improved by the arrangement of the struck-out portions to produce uniform air stream velocity and a reduction of dead air regions. To arrange the fin tabs in any desired manner, as recited in these claims, is considered to be an obvious exercise of routine experimentation, following the teaching of Kato et al., to optimize the air flow for any fin configuration and expected use.

2. Claims 1-49 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in the production of useful articles, such as heat exchange units for refrigeration.
